

Family Demography in Asia

A Comparative Analysis of Fertility Preferences

Edited by Stuart Gietel-Basten, Division of Social Science, The Hong Kong University of Science and Technology, Hong Kong SAR, People's Republic of China, John Casterline, Department of Sociology, The Ohio State University and Minja Kim Choe, East-West Center, Honolulu, US

The demographic future of Asia is a global issue. As the biggest driver of population growth, an understanding of patterns and trends in fertility throughout Asia is critical to understand our shared demographic future. This is the first book to comprehensively and systematically analyse fertility across the continent through the perspective of individuals themselves rather than as a consequence of top-down government policies.
